
High-Performance Wi-Fi for Businesses Large and Small

In today's hyper-connected, always-on world, your users expect to have fast, reliable network access at your business and public locations to conduct their professional and social activities. This demand presents businesses with both opportunities and challenges.

Wi-Fi technology enables users (customers, employees, guests, and other visitors) to connect at high speed to the Internet from Wi-Fi enabled devices without the need for a physical wired connection. And, while it's the most preferred and popular means of connectivity within a fixed location, the management of Wi-Fi networks can be labor intensive and costly. As a result, many businesses, especially those with limited or no IT resources, are opting to deploy and operate Wi-Fi as a managed service to minimize both CAPEX and OPEX.

Skiitech has partnered with Mojo Networks, the inventor of Cognitive WiFi™ and a "Visionary" in Gartner's 2018 Magic Quadrant for Wired and Wireless LAN Infrastructure, to bring together the very best combination of Wi-Fi technology and value-added managed services.

Modern Wi-Fi

Mojo's Cognitive Wi-Fi is built on open hardware and powered by the cloud to deliver better user

experiences, flexible deployment options, massive scalability and security, all at much lower costs.

- 100% cloud-based (no more controllers) for speedy deployment and unlimited scale
- Open Standards for access points, control and management hardware for maximum flexibility
- Industry-leading, patented Wireless Intrusion Prevention System (WIPS) to protect your users and data
- Dedicated, 3rd radio scanning that dynamically adjusts settings to ensure a superior user experience
- Multiple guest Wi-Fi options including social network, web form, SMS, payment-based and credentialed access

For Business and Marketing Leaders

An intelligent Wi-Fi solution can help businesses engage with, inform and monitor their users. Mojo's Cognitive Wi-Fi provides both real-time and historical data analytics across networks, clients, location, demographics, content analytics, and engagement to provide the business intelligence behind successful marketing campaigns.

- Leverage Wi-Fi analytics to drive business outcomes, brand loyalty, and increased customer satisfaction

- Quickly and easily create branded splash pages without HTML knowledge or expertise
- Provide personalized engagements and experiences for your guests
- Incorporate guest engagement into digital marketing and sales campaigns
- Measure the effectiveness of your marketing activities using analytics

Fully Managed Service

As an authorized Mojo Managed Services Provider, SkiiTech has an established practice with highly-skilled engineers who are dedicated to delivering and supporting Mojo's best-in-class, cloud-managed Wi-Fi solution. We'll handle the hard work of planning, configuring, and deploying your network, plus provide ongoing management and optimization of your system for complete, worry-free Wi-Fi service.

- Custom deployment options, including public or private cloud, and integration with local systems (NMS, SIEM, Syslog) and 3rd party systems (business intelligence, CRM and marketing)
- 24x7 monitoring and troubleshooting to deliver the best network connectivity, performance, and application experience
- Operational insights into inventory, alarms and events, statutory and compliance requirements
- Business insights into customer and device growth and trends, guest vs. corporate Wi-Fi usage, and the data that each are consuming
- Insights delivered daily, weekly, or monthly with automatic email delivery

Get Started

SkiiTech offers three standard packages for Managed Wi-Fi Services: Basic, Professional, and Enterprise. We can also create a customized package tailored to your specific business needs.
